Q: How to change value of a modal before its show I want to change the value of a input on page load, so it is pre-populated with the expected value. I then want to change this value before the modal opens. I have tried to assign the value in the change function, but for some reason the modal does not update when the value is changed. If I assign the value in the change function I get an error in the console saying: "Uncaught TypeError: Cannot set property 'value' of undefined" Can anybody help? function submitFoo() { let myInput = document.getElementById("myInput"); let name = myInput.value; console.log(name); } function change(e) { myInput.value = e; function openFoo(e) { let myModal = document.getElementById("myModal"); let name = myModal.value; let myInput = document.getElementById("myInput"); myInput.addEventListener('change', change); .myModal { display: none; position: fixed; z-index: 1; left: 0; top: 0; width: 100%; height: 100%; overflow: auto; background-color: rgb(0,

0, 0); background-color: rgba(0, 0, 0, 0.4); .modal-content { position: relative; background-color: #fefefe; margin: auto; padding: 0; border: 1px solid #888; width: 30%; .myModal-dialog { padding: 25px; .myModal-content { box 82157476af
